

Learning Outcomes

- Students explore the relationships between living and non-living things in a forest.
- Students identify how living things can change throughout their life cycle.
- Students explore the basic needs of trees, forests and the living things that live among them.
- Students examine the parts of a tree/forest and explore how other living things rely on trees for food and shelter.
- Students identify how they can care for and support the basic needs of living things.
- Students explore the relationship between tiny living things (invertebrates) and leaf litter.
- Students identify the different ways people use forest products in their daily life.
- Students explore the ways that they can care for forest environments.
